EBV ind and EBV: Breeding Value Index and Breeding Value  
 (EBVs are also expressed as easily interpretable Breeding Value Index)

Birth wght Birth Weight  
 Birth Mat Birth Maternal  
 Milk Milk  
 Wean wght Weaning weight  
 Postwean Post wean weight (12- and 18 mnths)  
 Mat.wght Mature weight  
 ADG Average daily gain (growth)  
 Kleiber Kleiber ratio (efficient growth on veld)  
 FCR Feed Conversion Ratio (kg feed/kg Weight gain)  
 Length Body length  
 Height Shoulder or hip height  
 Scrotum Scrotum circumference  
 AFC Age at first calf  
 ICP Intercalving period

# Logix Genetic Catalogue

The Selection Values in this catalogue indicate the genetic merit of the animals since all environmental effects have been removed. Selection Values are a combination of relevant breeding values and are based on animals that were scientifically measured according to international norms. Breeding values are estimated from performance of ancestors and progeny, as well as own performance.

## It is easy to interpret Selection Values:

- Average of the live animals in the breed: 100
- Above 100: more desirable,
- Below 100: less desirable

Sub Value	What does an above breed average value (100) mean?
Calving Ease	Smaller calf at birth – easier calving
Milk	Cows / daughters with more milk and better mothering traits
Calf Growth	Heavier calf at wean due to growth ability of the calf itself.
Low Maintenance	Animals with lower maintenance requirements (lower mature weight EBVs).
Fertility	Cows / daughters that calve earlier and / or more regularly.

Selection Value	What does it measure?	Notes
<b>Cow Value</b>	Genetic merit to breed daughters that are fertile, calve easily, wean heavy calves, have lots of milk and low maintenance requirements.	Combination of the sub-values Calving Ease, Milk, Calf Growth, Maintenance and Fertility.
<b>Growth Value</b>	Bulls /Cows with genetic merit for growth and growth efficiency after weaning.	The animal's genetic merit for growth summarized in a single value.
<b>Production Value</b>	Combination of Cow Value and Growth Value.	Single value that summarizes the genetic merit of the animal.

## Accuracy (Acc):

The amount of information available for breeding value estimation is indicated with an accuracy value (Acc). The accuracy is a value between 0 and 99. Younger animals have lower accuracies than older animals.

A combination of the following information is used to estimate the accuracy:

- **Parents:** Known or unknown; Accuracy of parents' breeding values.
- **Own measurement:** Animal is measured for trait, or genetically correlated trait

- **Progeny:** Number of progeny measured for trait or correlated traits

## Wide interpretation of Acc:

Acc>80%: A lot of information, AI bull, many offspring

Acc>60%: Animal has measured progeny

Acc>30%: Animal measured

Acc <30%: Little information
